

The ABC's of *Box* *Jumping*

The safest and most effective ways to perform this great exercise

BFS has been saying it for nearly four decades, and finally the message is going mainstream: “Box jumps work!” Not just a way to make athletes more powerful, box jumping is a fast, efficient method of conditioning for physical fitness. Let’s take a closer look.

Box jumping is associated with the concept of plyometrics. The late Russian sport scientist Yuri Verkhoshansky is considered the founder of plyometrics as a means of sports training to improve athletic performance.

In the 1950s Verkhoshansky was a track coach who coached jumpers at the Aeronautical Engineering Institute in Moscow. Due to Moscow’s harsh winters and small indoor training facilities, Verkhoshansky had to be creative to improve the athletic ability of his athletes in the off-season. Although weight training was not generally accepted for jumpers at this time, this coach thought differently.

Verkhoshansky believed weight training would be valuable for jumpers due to the stress of the jumps in athletics – in the takeoff for the triple jump, for example, the stress could reach up to 660 pounds. To replicate this stress, he tried having his athletes perform heavy half squats, but he found that the lower back was the weak link and the lift caused back problems. He also tried leg presses, but because athletes at that time had no access to the appropriately designed machines we have now, they had to balance a barbell on their feet – obviously a dangerous practice.

As a solution, Verkhoshansky found that he could create a safer training effect with less stress on the spine by performing jumps off platforms. These jumps would increase muscle tension and create a release of elastic energy stored in the muscles and tendons during landing. He called this type of exercise “shock training,” but in the US this exercise was put into a larger category called plyometrics. Likewise, in the US an “aerobics” class involves more than just aerobic training, as often stretching and abdominal training are also performed.

Verkhoshansky’s methods worked, and 12 of his athletes achieved the prestigious level of “Master of Sport” in the 1960s; in 1964 one of his athletes, Boris Zubov, broke Soviet and European records in the sprint events. Verkhoshansky eventually left coaching to focus on scientific research and on teaching his training methods to other coaches. In fact, US researchers have confirmed Verkhoshansky’s work.

In a paper published in the *Journal of Applied Sport Science Research* in 1992, researchers reported the results of a six-week study on the effects of squatting and plyometrics on the vertical jump. The group that performed only the squat increased their vertical jump

Even in soccer, the ability to jump high gives an athlete an distinct advantage. Shown is Sean Wright of Reeths-Puffer High School in Muskegon, Michigan. The school was featured in our March/April 2006 issue.

by 1.3 inches, the group that performed just plyometrics increased it by 1.5 inches, but the group that performed both squats and plyometrics increased their vertical jump by 4.2 inches!

Although Verkhoshansky’s shock training methods are better than half squats, they are extremely hard on the body and must be used conservatively. However, there are other forms of box

jumping that can be used for conditioning, activities that Verkhoshansky would call “preparatory plyometrics.” For example, standing in front of a box and simply jumping up and landing on the box creates a strong contraction of the leg muscles, but because the athlete drops only a few inches before making contact with the box, there is minimal stress on the joints.

Of course, the height of a box chosen for this purpose depends upon the level of the athlete – which is why the smaller BFS Readiness boxes (which start at just 10 inches) are ideal for children, untrained athletes, individuals coming off injuries, and even senior citizens. For high-level athletes, BFS offers a challenging 42-inch box.

Anatomy of a Plyo Box

BFS CEO/Founder Dr. Greg Shepard introduced the BFS Plyo box nearly 30 years ago. To enhance the stability of the exercise and facilitate box jumping drills involving forward movement, BFS's boxes have a nonslip landing surface and a pyramid shape. This design also reduces the weight of a box and allows the boxes to be stacked upon each other to reduce storage area; the hand holes placed near the top make it easy to move the boxes.

Although lightweight steel plyometric boxes are available from other exercise equipment companies, the problem with those is that an athlete's feet can easily get caught in an open plyometric box. With a solid box such as the ones BFS offers, the feet simply slide down if the athlete does not jump

A variety of box sizes is necessary to train all levels of athletes. The triangle shape enables the boxes to be stacked to save space – in contrast to the square box shown above.

high enough to complete the exercise.

To properly run a plyometric box jumping program, coaches should make sure that athletes have access to boxes of

various heights. Whereas the standard plyometric box for high school athletes is 20 inches, for middle school athletes, heavier athletes and athletes at a lower skill level it's best to start them on 10-inch Readiness boxes. Also, spotters should be used when attempting jumps of greater difficulty, and nothing should be placed on top of a plyometric box. Rather than purchasing higher boxes, some coaches will place thick bumper plates on top of plyo boxes – but this dangerous practice places the athlete at a high risk of injury.

To learn more about the BFS Plyometric Box Jumping Program, order a copy of the BFS textbook, *Bigger Faster Stronger*, and the BFS DVD *Plyo Box Jumping*. This program is a great method to increase athletic and physical fitness. 

The BFS Readiness boxes start at 10 inches to accompany beginners or less-explosive athletes.

PLYO BOXES

VARSITY PLYO BOX SET

SET INCLUDES: 1 booster
3 20" boxes Plyometric box jumping video.
1 32" box

NOW JUST
\$595

Stock (Black Paint)
#651256
Call for custom color pricing

Our Plyo Boxes are fully stackable to save space.

INDIVIDUAL BOXES AVAILABLE AS YOU EXPAND YOUR PLYOMETRICS PROGRAM

ALL PLYO BOXES CONSTRUCTED WITH THE BFS CLOSED SOLID SIDED DESIGN TO REDUCE THE RISK OF INJURY BY TRIPPING OR STEPPING THROUGH ON A MISSED REP

BIGGER FASTER STRONGER

BFS

BFS plyo boxes are proudly designed and manufactured in the USA

DEDICATED TO HELPING ATHLETES SUCCEED SINCE 1976

BOUND FOR SUCCESS

GET A JUMP ON THE COMPETITION WITH BFS PLYOMETRICS

PLYO BAR

Finally something new in plyometrics

- ▶ Sturdy adjustable bar height from 23" to 39"
- ▶ Great for beginner's & advanced athletes
- ▶ Challenging anaerobic exercise
- ▶ Dozens of sport specific exercises in one station

\$995

l-77" w-100" h-23"

Fun and Dynamic

PLYO RAMP

\$455

l-89" w-48" h-14"

- ▶ Develop explosive lateral quickness
- ▶ Rehab tool for ankles and knees
- ▶ Stable steel frame; non-slip rubber top
- ▶ Includes plyo ramp video

FRONT TO BACK

QUARTER EAGLE

DURABLE QUALITY CONSTRUCTION

PLYO MAX 3 \$169

- ▶ One Box - 3 heights!
- ▶ One box, maximum versatility
- ▶ Flip for 3 height options, 20, 24 and 30 inches
- ▶ Solid sided construction

BIGGER FASTER STRONGER

Plyometrics are essential to developing the maximum from your athletes

**HEAVY DUTY
BFS PUSH/PULL
SLED**

\$295

- ▶ Heavy 11 Gauge Steel Tubing
- ▶ Durable 3/8" Solid Steel Slide Plates
- ▶ Built to be used on concrete or asphalt or any hard surface
- ▶ Pull Harness attachments

\$345

With Harness and Lead

**30' BALLISTIC
RESPONSE LADDER**

\$59⁹⁵

- ▶ Our #1 speed training product!
- ▶ Improve linear and lateral movement
- ▶ 10 yards 20 rungs

\$39⁹⁵

- ▶ 15' Ballistic Response Ladder

**12" PERFORMANCE
HURDLES**

\$8⁹⁵

- ▶ 6" Hurdle \$8.50
- ▶ Extension \$5.99
- Increases height of hurdles by 6 inches!
